

Emerald Brite

Technical Bulletin - DP514

Features:

- ◆ Non-acid wheel cleaner
- ◆ Foaming action
- ◆ Cuts through brake dust and grime
- ◆ Ready-to-use
- ◆ May dilute 3 to 1 with water

Product Description:

Emerald Brite is a non-acid, foaming wheel cleaner that is an alternative to harsh acid wheel cleaners. This unique formula is primarily used in vehicle reconditioning and wheel maintenance for the removal of brake dust, road grime and heavy soil build up.

Product Benefits:

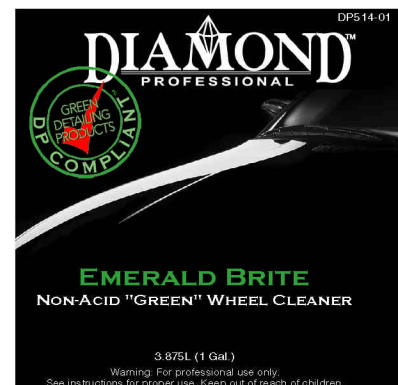

The foaming action of Emerald Brite "Green" wets the wheel completely for more rapid cleaning. With a blend of cleaning agents that are formulated to clean most wheels without the use of a brush, Emerald Brite is an outstanding alternative in areas where you cannot use acids or bifluoride to clean wheels. Meets or exceeds the recommendations of car manufacturers who suggest the use of non-acid wheel cleaners.

Directions:

Make sure wheels are cool and dry. Always test non-factory wheels in a small non-visible area, such as on the back side, before using Emerald Brite. The product may be applied with a tank type sprayer or quart detail spray bottle. Spray wheel completely with Emerald Brite wheel cleaner. Let product foam, wait one minute and rinse thoroughly. For heavier grime brush after spray application. May be diluted up to 3 to 1 with water. Always test for staining on after market aluminum or non-coated wheels before use.

Packaging:

Gallons
